Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Contents

List of contributors ..... ***xv***
Preface ..... ***xix***

Chapter 1: Immobilization of anaerobic ammonium oxidation bacteria for nitrogen-rich wastewater treatment ***1***

Shou-Qing Ni, Hafiz Adeel Ahmad and Shakeel Ahmad

1.1 Introduction 1
1.2 Anammox bacteria and their metabolic process 3
1.3 Cell immobilization: a strategy to improve microbial wastewater treatment 5
1.3.1 What is cell immobilization? 5
1.3.2 Different approaches for cell immobilization 5
1.4 Why is gel immobilization advantageous? 8
1.5 Gel materials used for the immobilization of anammox 9
1.5.1 Polyvinyl alcohol and polyvinyl alcohol/sodium alginate 10
1.5.2 Waterborne polyurethane 10
1.5.3 Polyethylene glycol gel 11
1.6 Application of cell immobilization in anammox and partial nitrification 12
1.6.1 Application of immobilized anammox 12
1.7 Commercialization of immobilizing technology 13
1.8 Conclusion 17
Acknowledgments 18
References 18

Chapter 2: Accelerated bioremediation of petroleum refinery sludge through biostimulation and bioaugmentation of native microbiome ***23***

Jayeeta Sarkar, Ajoy Roy, Pinaki Sar and Sufia K. Kazy

2.1 Introduction 23
2.2 Petroleum refinery waste: composition and hazard 26
2.3 Microbiology of hydrocarbon-associated environments 28

2.4 Microbial bioremediation of waste sludge 43
2.4.1 Accelerated bioremediation 44
2.5 Factors affecting bioremediation 49
2.6 Future scope 51
References 51
Further reading 64

Chapter 3: Degradation and detoxification of waste via bioremediation: a step toward sustainable environment 67

Komal Agrawal and Pradeep Verma

3.1 Introduction 67
3.2 Bioremediation and the role of bioavailability 68
3.2.1 Surfactants 68
3.2.2 Biodegradation 69
3.2.3 In situ and ex situ bioremediation 70
3.3 The degradation and/or detoxification of pollutants 70
3.3.1 Heavy metal pollutant 70
3.3.2 Dyes 73
3.4 Role of genetic engineering in bioremediation 76
3.4.1 Bioremediation through microbial systems biology 77
3.5 Limitations and future prospect 78
Acknowledgment 78
Competing interests 78
References 79
Further reading 83

Chapter 4: Fungal laccases: versatile green catalyst for bioremediation of organopollutants 85

Ajit Patel, Vanita Patel, Radhika Patel, Ujjval Trivedi and Kamlesh Patel

4.1 Introduction 85
4.2 Distribution and physiological functions of laccases 87
4.3 Production of laccases 88
4.3.1 Screening of laccase-producing fungi 88
4.3.2 Cultural and nutritional conditions for laccase production 89
4.3.3 Heterologous production of laccases 91
4.3.4 Biochemical properties of laccases 94
4.3.5 Mode of action of laccases 97
4.3.6 Classification of laccases according to substrate specificity 100

4.3.7 Laccase mediator system 101
4.3.8 Immobilization of laccase 104
4.4 Application of laccases for bioremediation of environmental pollutants 106
4.4.1 Degradation of xenobiotic compounds 107
4.4.2 Decolorization of synthetic dyes 110
4.4.3 Treatment of industrial effluent 113
4.4.4 Potential applications in pulp and paper industry 113
4.4.5 Applications of laccases to develop ecofriendly processes 114
4.5 Limitations and future prospects 115
References 116

Chapter 5: Emerging bioremediation technologies for the treatment of wastewater containing synthetic organic compounds 131

Kunal Jain, Jenny Johnson, Neelam Devpura, Rohit Rathour, Chirayu Desai, Onkar Tiwari and Datta Madamwar

5.1 Introduction 131
5.2 Electrobioremediation 134
5.3 Bioelectrochemical systems/technology 135
5.4 Phytotechnology (phytoremediation) 138
5.4.1 Phytoreactors and constructed wetlands 138
5.4.2 Plant–microbe phytoremediation 139
5.4.3 Plant enzymes and metabolites 140
5.4.4 Hydroponic systems 141
5.4.5 Plant tissue culturing 141
5.5 Electron beam irradiation 142
5.6 Conclusion: unresolved challenges and future perspectives 144
Acknowledgments 146
References 146

Chapter 6: Bacterial quorum sensing in environmental biotechnology: a new approach for the detection and remediation of emerging pollutants 151

Debapriya Sarkar, Kasturi Poddar, Nishchay Verma, Sayantani Biswas and Angana Sarkar

6.1 Introduction 151
6.2 Mechanisms of bacterial quorum sensing 152
6.2.1 Two-component system in Gram-positive bacteria 153
6.2.2 Acyl homoserine lactone in Gram-negative bacteria 153
6.3 Quorum sensing in environmental biotechnology 154

6.3.1 Heavy metal detection 154
6.3.2 Pathogen detection 158
6.3.3 Bioremediation 158
6.3.4 Biofilm formation 159
6.3.5 Hydrocarbon remediation 160
6.4 Limitations of microbial quorum sensing 161
6.5 Conclusion 161
References 161

Chapter 7: Bioremediation: an effective technology toward a sustainable environment via the remediation of emerging environmental pollutants ... 165

Komal Agrawal, Ankita Bhatt, Venkatesh Chaturvedi and Pradeep Verma

7.1 Introduction 165
7.2 Emerging pollutants 166
7.2.1 Bisphenol A 166
7.2.2 Polycyclic aromatic hydrocarbons 168
7.2.3 Polychlorinated biphenyls 169
7.2.4 Pharmaceutical wastes 170
7.2.5 Hospital effluents as source of emerging pollutants 171
7.2.6 Other emerging pollutants 172
7.3 Types of bioremediation 173
7.3.1 Microbial bioremediation 173
7.3.2 Phycoremediation 175
7.3.3 Mixed cell culture system 176
7.3.4 Phytoremediation 176
7.3.5 Enzymatic bioremediation 179
7.3.6 Zooremediation 179
7.3.7 Vermiremediation 179
7.4 Emerging techniques 180
7.4.1 Application of biosurfactants 180
7.4.2 Immobilization techniques 181
7.4.3 Adsorption and electrostatic binding 181
7.4.4 Entrapment in porous matrix and encapsulation 181
7.4.5 Electrokinetic remediation 182
7.4.6 Metagenomics 182
7.4.7 Protein engineering 183
7.4.8 Bioinformatics 183
7.4.9 Nanotechnology 183
7.4.10 Genetic engineering 184
7.4.11 Designer microbe and plant approach 184

7.4.12 Rhizosphere engineering 185
7.4.13 Manipulation of plant−microbe symbiosis 185
7.4.14 Cometabolic bioremediation 186
7.5 Conclusion 186
Acknowledgment 186
Competing interests 186
References 187

Chapter 8: Application of metagenomics in remediation of contaminated sites and environmental restoration 197

Vineet Kumar, Indu Shekhar Thakur, Ajay Kumar Singh and Maulin P. Shah

8.1 Introduction 197
8.2 Mechanism of bioremediation 200
8.3 Approaches used to study microbial communities involved in in situ and ex situ bioremediation 202
8.3.1 Culture-based techniques 203
8.3.2 Culture-independent techniques 203
8.4 Metagenomics: a culture-independent insight 215
8.4.1 Functional-based metagenomics 216
8.4.2 Sequence-based metagenomics 217
8.4.3 Metatranscriptomics 218
8.4.4 Metaproteomics 218
8.4.5 Metabolomics 219
8.4.6 Metagenomics sequencing strategies 220
8.5 Next-generation sequencing technologies to explore structure and function of microbial communities 220
8.6 Conclusion 224
References 225
Further reading 232

Chapter 9: In situ bioremediation techniques for the removal of emerging contaminants and heavy metals using hybrid microbial electrochemical technologies 233

M.M. Ghangrekar, S.M. Sathe and I. Chakraborty

9.1 Introduction 233
9.1.1 Bioremediation for pollution control and classification of bioremediation techniques 234
9.1.2 Microbial electrochemical technology 235

9.2 In situ bioremediation using microbial electrochemical technologies 235
9.2.1 Constructed wetlands-microbial fuel cells 235
9.2.2 Sediment-microbial fuel cells 241
9.2.3 Soil-microbial fuel cells 243
9.2.4 Plant-microbial fuel cells 246
9.3 Future scope of research 250
9.4 Summary 251
References 251

Chapter 10: Gene-targeted metagenomics approach for the degradation of organic pollutants 257

Raghawendra Kumar, Dinesh Kumar, Labdhi Pandya, Priti Raj Pandit, Zarna Patel, Shivarudrappa Bhairappanavar and Jayashankar Das

10.1 Introduction 257
10.2 Gene-targeted metagenomics 258
10.3 Methods used for metagenomics studies 259
10.4 Bacterial community abundance 262
10.4.1 Biodegradation pathway involved in the degradation of organic compounds 262
10.4.2 Functional metagenomics 265
10.5 Conclusion 268
10.6 Future perspective 269
References 269
Further reading 273

Chapter 11: Current status of toxic wastewater control strategies 275

Sushma Chityala, Dharanidaran Jayachandran, Ashish A. Prabhu and Veeranki Venkata Dasu

11.1 Introduction 275
11.2 Causes and effects of toxic wastewater pollution 276
11.3 Current interventions in toxic wastewater control 277
11.3.1 Treatment using aquatic systems 277
11.3.2 Treatment using microalgae 278
11.3.3 Treatment using vermifiltration 278
11.3.4 Other interventions in toxic wastewater control 279
11.4 Wastewater reuse 281
11.5 Conclusion 282
Acknowledgments 282
References 282

Chapter 12: Latest innovations in bacterial degradation of textile azo dyes 285

Shantkriti Srinivasan, Kanyaga Parameswari M and Siranjeevi Nagaraj

12.1 Introduction 285
12.2 Bacteria in degradation of azo dyes 287
12.2.1 Bacteria as source 287
12.2.2 Mechanism of azo dye degradation by bacteria 288
12.2.3 Phases of treatment 289
12.2.4 Recent studies in bacterial mediated azo dye degradation 290
12.2.5 Analytical methods in azo dye degradation 294
12.2.6 Analysis of efficiency of bacterial dye degradation by toxicity tests 295
12.3 Computational inputs in enhancing biodegradation 296
12.3.1 Choice of strains: adapted versus nonadapted strains 296
12.3.2 In silico analysis as a valuable tool 298
12.4 Alternative front-runners: fungi, yeast, and algae-mediated azo dye degradation 300
12.5 Future perspective 301
References 302

Chapter 13: Development in wastewater treatment plant design 311

Bapi Mandal, Anwesha Purkayastha, Ashish A. Prabhu and Veeranki Venkata Dasu

13.1 Introduction 311
13.1.1 Conventional wastewater treatment technology 312
13.1.2 Recent advances achieved in wastewater treatment plant 315
13.2 Tertiary treatment 320
13.3 Conclusion 320
References 320

Chapter 14: Engineering biomaterials for the bioremediation: advances in nanotechnological approaches for heavy metals removal from natural resources 323

Magapu Solomon Sudhakar, Aakriti Aggarwal and Mahesh Kumar Sah

14.1 Introduction 323
14.2 Bioremediation 325
14.3 Nanotechnology and bioremediation 325
14.3.1 Nanomaterials used for removing pollutants 326
14.3.2 Bioremediation of soil 332
14.4 Conclusion 333
Acknowledgement 334
References 334

Chapter 15: Algal–bacterial symbiosis and its application in wastewater treatment 341

Inigo Johnson, Sudeeptha Girijan, Binay Kumar Tripathy, Mohammad Abubakar Sithik Ali and Mathava Kumar

15.1 Introduction 341
15.2 The symbiotic process 342
15.2.1 Exchange of information in the form of bioactive compounds for symbiosis 343
15.2.2 Exudates that can inhibit the microbes in the vicinity 345
15.2.3 Exudates that can stimulate the microbes in the vicinity 346
15.2.4 Factors affecting symbiotic systems 349
15.3 Applications in wastewater treatment 351
15.3.1 Types of reactors 351
15.3.2 Nutrients removal 353
15.3.3 Metal removal 356
15.3.4 Organic matter removal 357
15.3.5 Emerging contaminants removal 359
15.3.6 Removal of refractory compounds 361
15.4 Energy generation 362
15.4.1 Algal biohydrogen production 363
15.4.2 Algal lipid production 363
15.4.3 Microbial fuel cell reactor using algal–bacteria interaction 364
15.5 Conclusion and future directions 365
References 366

Chapter 16: Role of plant growth–promoting rhizobacteria in mitigation of heavy metals toxicity to Oryza sativa L. 373

Vishnu Kumar, Gayatri Singh, Rajveer Singh Chauhan and Geetgovind Sinam

16.1 Introduction 373
16.2 Different genera of plant growth–promoting rhizobacteria 374
16.3 Plant growth–promoting rhizobacteria role in heavy metals dynamics in the soil 377
16.4 Plant growth–promoting rhizobacteria's role in controlling pathogens in rice 379
16.5 Plant growth–promoting rhizobacteria in remediation of the environment 380
16.6 Conclusion and future prospect 384
References 384
Further reading 389

Chapter 17: Study of transport models for arsenic removal using nanofiltration process: recent perspectives 391

Robin Marlar Rajendran, Sangeeta Garg and Shailendra Bajpai

17.1 Introduction 391
17.1.1 Sources 391
17.1.2 Health effects 393
17.1.3 Permissible limit 393
17.2 Chemistry of arsenic 395
17.3 Methods of arsenic removal from water/wastewater 395
17.3.1 Membrane technology 396
17.4 Nanofiltration of arsenic 397
17.4.1 Modeling of nanofiltration membranes for arsenic removal 397
17.5 Conclusion and future perspective 401
Nomenclature 401
Greek symbols 402
Abbreviations 402
References 402
Further Reading 405

Chapter 18: Bioremediation and biorecovery of aqueous lead by local lead-resistant organisms 407

B. van Veenhuyzen, C. Hörstmann, J. Peens and H.G. Brink

18.1 Introduction 407
18.2 Remediation of Pb 408
18.2.1 Conventional methods for Pb remediation or recovery 408
18.2.2 Bioremediation of Pb 408
18.2.3 Mechanisms of bioremediation 409
18.3 Case study of aqueous Pb biorecovery by local Pb-resistant organisms 411
18.3.1 Characterization of bacterial consortia 411
18.3.2 Precipitate identification 412
18.3.3 Microbiological and kinetic study 413
18.3.4 Case studies of varied operating conditions 417
18.4 Conclusion and outlook 421
Acknowledgment 422
References 422

Chapter 19: Microbial bioremediation of azo dye through microbiological approach 425

Celia Vargas-de la Cruz and Daniela Landa-Acuña

19.1 Introduction 425
19.2 Classification of dyes 426
19.3 Role of environmental parameters on microbial biodegradation and bioremediation of azo dye 427
19.4 Effects of environmental parameters on azo dye degradation 432
19.4.1 Temperature 433
19.4.2 Oxygen 433
19.4.3 Dye concentration 434
19.4.4 Electron donor 435
19.4.5 pH 435
19.4.6 Dye structure 435
19.4.7 Redox potential 436
19.4.8 Redox mediator 437
19.4.9 Decolorization by genetically modified organisms 438
19.5 Conclusion 438
References 438
Further reading 441

Chapter 20: Novel process of ellagic acid synthesis from waste generated from mango pulp processing industries 443

Murugan Athiappan, Shantkriti Srinivasan, Rubavathi Anandan and Janani Rajaram

20.1 Introduction 443
20.1.1 Waste from mango pulp processing industries 443
20.2 Composition of mango wastes 444
20.3 Types of tannins 444
20.4 Bioconversion of tannin to ellagic acid 445
20.5 Microbes involved in the production of ellagic acid 447
20.6 Applications of ellagic acid 448
20.7 Conclusion 451
References 451
Further reading 454
